Wings & Wheels Risk Assessment Guidance Notes

A full Risk Assessment will need to be carried out for **ALL** Trade Stands and Exhibits. In addition to being an event requirement this is a legal requirement. The following guidance should aid you in carrying out your Risk Assessment. A form to record your findings has also been provided. You may make as many copies of this form as you need.

PLEASE NOTE THAT YOU CAN NOT SUBMIT A FORM THAT IDENTIFIES NO RISKS.

Risk is the combination of the likelihood of a hazardous event occurring and the consequence of the hazardous event. A hazard is anything that has the potential to cause harm. A hazardous event takes place when someone or something interacts with the hazard and harm results. Likelihood is a measure of the chance the hazardous event will occur. Consequence is the outcome of the hazardous event.

A risk assessment is a careful examination of anything that could cause people to suffer injury or ill health when visiting your trade stand or exhibit. There is never a zero risk rating as there is always a chance of something happening.

Identifying the Hazards

A hazard is anything with the potential to cause harm. You will need to identify all the hazards including those relating to individual activities as well as specific equipment, both during the build up period and for the duration of the event. The following may help in identifying areas of concern, though this list is by no means exhaustive and care should be taken to identify any other hazards associated with your activities at the event.

As a trader or exhibitor you need to take care to protect everyone expected at the event, including staff, contractors, other exhibitors and visitors. You have a particular duty of care to the very young, very old and those with disabilities. As you identify a hazard make a note of it on the Risk Assessment Form provided.

For each hazard consider whether or not it can be eliminated completely. If not then decide what must be done to reduce the risk to an acceptable level. (Only use personal protective equipment as a last resort when there is nothing else you can reasonably do.)

Can you do any of the following?

- *Remove the hazard*
- *Prevent access to the hazard: e.g. by guarding dangerous parts of machinery*
- *Implement procedures to reduce exposure to the hazard*
- *Find a suitable substitute for that activity/machine, etc.*
- *Use personal protective equipment*

If the hazard cannot be eliminated you need to move onto the next stage.

Assessing the Risk

The risk is the likelihood of something happening. At this stage you need to consider how likely it is to happen and what could the impact be if it did happen?;

1. List/describe the activity/tasks

2. Identify the risks—what the hazards are, who might be harmed and how. These could include (but are not limited to) any slip, trip or fall hazards/Sharp edges or protrusions/Fire risks and obstruction of emergency evacuation routes/Use of chemicals, dust or fumes/Moving parts of machinery/Moving vehicles/Electrical equipment safety/Manual handling activities/Noise levels/Poor lighting, heating or ventilation/risk from specific demonstrations or activities/Crowd intensity and pinch points

3. Who is affected—These could include (but are not limited to) Stewards & Employees / Volunteers / Vendors, exhibitors and performers / Members of the public/Disabled persons/Children and the elderly/Expectant mothers/Local residents and tenants

4. Other areas for consideration: Fire, security and cash handling/Health and Safety/Structures/Vehicles and trailers, etc./Waste management

Continued...Wings & Wheels Risk Assessment Guidance Notes

5. Estimate the risk:

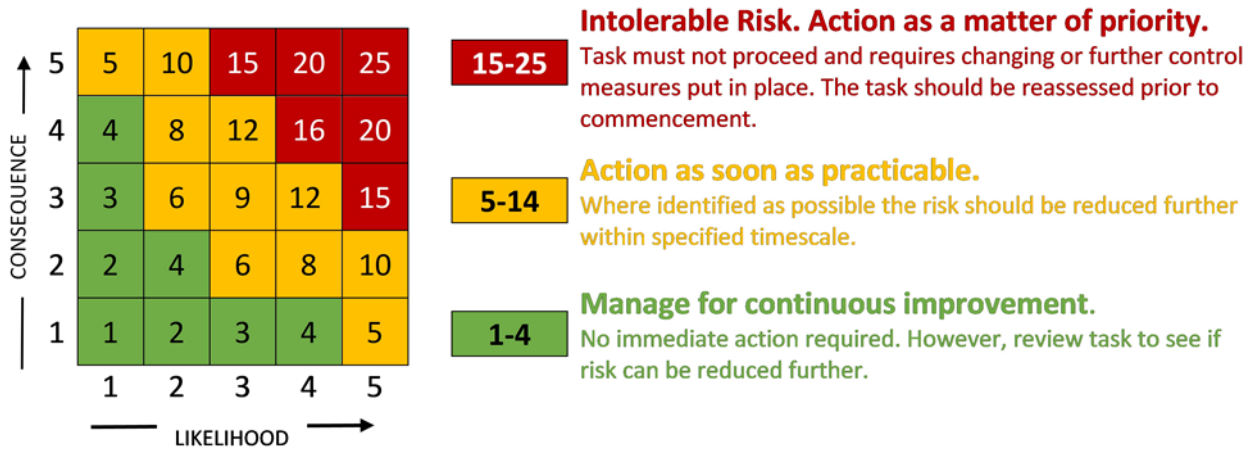

First decide on the likelihood:

- Very Likely (1 in a 100) (5)
- Likely (1 in a 1,000) (4)
- Fairly Likely (1 in 10,000) (3)
- Unlikely (1 in 100,000) (2)
- Very unlikely (1 in a million) (1)

Second decide on the consequence:

- Catastrophic (death) (5)
- Major (more than 7 days absence/multiple or major injuries) (4)
- Moderate (up to 3 days absence/cuts/burns/breaks/fractures) (3)
- Minor (e.g. minor injuries needing first aid) (2)
- Insignificant (e.g. no injuries) (1)

6. Use the risk matrix to determine if risk controls/actions are

7. If yes, complete the action required column on the risk assessment form. If risk controls or action are required then make sure that the responsibility for it is given to a named individual and ask them to sign to say that they have done it.

Example of risk assessed for guidance only:
